The autoFamily Optimizes Network Performance A Complete Solution For IT Networks

Codima's team has a long track record of bringing highly advanced network technology to the market. Today Codima is recognized for developing software tools that help organizations to reduce costs, save time and successfully manage their IT networks from beginning to end.

Codima is a leading provider of VoIP Management and Network Inventory, Mapping and Monitoring, tools. We bring new innovative technology to the market that is easy to use, cost efficient and highly visual.

Codima Toolbox has a fully automated and fully integrated architecture, enabling tools to be scaled and combined or to be installed as standalones. Codima Toolbox is a complete set of tools that also delivers a rich set of add on modules.

The tools manage VoIP networks from pre-assessment through post-deployment as well as map, monitor and troubleshoot enterprise networks visualizing IT assets directly with Microsoft® Office Visio®.

In order to create best practice VoIP Management to enable organizations to take Voice over IP to the next level, Codima has focused on a beginning-to-end solution introducing the easy to use One Click Management™.

Codima Toolbox is built from the ground up to be VoIP specific. It is a truly unique solution providing a versatile set of tools and modules, which are scalable and can manage a VoIP network from testing to daily operation.

The versatile and cost efficient technology targets all the issues of running complex and business critical networks.

Organizations today depend on their networks to perform 24/7 and need full control of their IT assets to improve budgeting, facilitate auditing and to comply with new regulations.

autoMonitor™, the newest addition to Codima Toolbox brings a One Stop Solution for real time network performance monitoring visualizing an enterprise network directly in Microsoft® Office Visio®. autoAsset™ and autoMap™ provide network inventory and network mapping making visual control and proactive network maintenance of entire IT networks possible. autoMonitor™ and autoMap™ are featured at Microsoft® Office Marketplace worldwide and at Microsoft® Visio® Toolbox www.visiotoolbox.com.

Built by IT professionals for IT professionals Codima Toolbox offers two tool kits specifically tailored to help IT professionals - autoVoIP™ Consultancy Kit and autoAnalyzer™ Consultancy Kit.

Codima Toolbox resells via Codima Partners in North America, EMEA, Asia and Australia.

What Codima Toolbox Solves

- Codima Toolbox delivers software tools helping organizations to successfully manage their VoIP networks from beginning-to-end - a fully automated and fully integrated solution that is truly scalable and flexible
- The VoIP Management tools help avoid downtime in VoIP networks and increase Quality of Service (QoS) levels
- The VoIP pre-assessment tool prevents projects delays, prepares for successful VoIP installations, prevents customer or client dissatisfaction with the start up of a VoIP network and lowers installation costs
- The VoIP post-deployment tools minimize downtime, ensure acceptable QoS levels and increases customer satisfaction as well as lower maintenance, training and administrative costs
- The Network Monitoring tool reduces expensive downtime and improves network performance with a one stop solution that delivers easy to use real time network monitoring
- The Network Inventory tool ensures IT consolidation and compliance, reduces maintenance costs, reduces security risk, assists in network support and design, rationalizes equipment and optimizes software license usage
- The Network Mapping tool saves time, increases cost efficiency, ensures compliance and IT service assurance, facilitates IT budgeting, network audits and legal requirements in addition to rationalizes equipment and software license requirements
- The Network Analyzer Toolkit minimizes expensive IT network downtime, ensures IT network performance and improves operational efficiency

What Codima Toolbox Offers

- Codima Toolbox offers fully automated and fully integrated software tools helping organizations to successfully manage their networks
- Codima Toolbox delivers core VoIP management from pre-assessment tools through post-deployment tools that tests, monitors, analyzes and troubleshoots VoIP networks
- Codima Toolbox encompasses a set of add-ons including Remote Management, Frame Flow Analyzer, RTP Analyzer, Call Playback, Report Browser and Path Analyzer enhancing customized solutions
- The newest addition to Codima Toolbox, autoMonitor™ brings a One Stop Solution for Network Performance Monitoring that maps, monitors and finds bottlenecks 24/7, visualizing the Enterprise network in Microsoft® Office Visio®
- Codima Toolbox delivers unique Network Inventory and Network Mapping tools for IT discovery and creation of topology maps directly in Microsoft® Office Visio® making it easy for organizations to know what is installed on their IT networks. The comprehensive report system provides simple reports and topology drawings can viewed on a web page where users can share extensive asset information. The visualization tool autoMap™ integrates with Microsoft® Baseline Security Analyzer (MBSA) that performs a analysis and Codima Multi Site Scheduler can automate discovery across multiple remote sites.
